

Anywhere Anytime Any Device

Superlive Plus is a powerful video surveillance APP. It can easily manage remote video monitoring and handle smart alarm information around the world so that the users can know about the security status all the time.

With interactive design, fully new interface and one-click operations. Superlive Plus brings excellent user experience for customers. Moreover, users can simply add and share devices by scanning QR code.

FEATURES

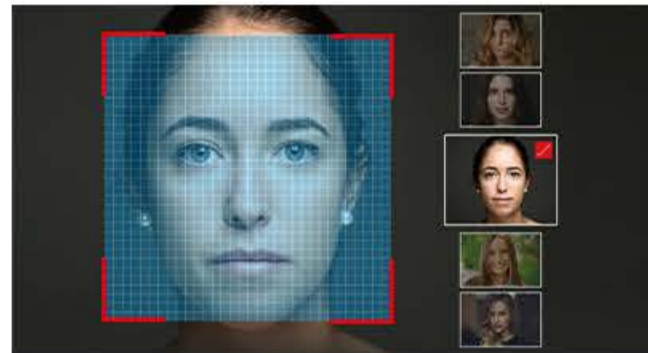

Adding Face to Database

Take a face picture and enter the corresponding information. Then, save the settings. It will be uploaded to NVR' s or Server' s face database.

Search by Picture

Take a picture and then set the similarity and "Start Time " & " End Time " to search the related face images and videos.

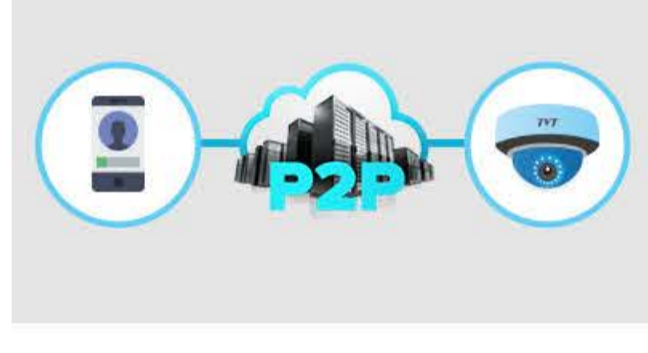

Search by Name

Face can be searched by name. Enter the name, then choose related face and set the terms to search pictures and videos.

P2P

P2P servers are deployed in several continents, guaranteeing high traversal rate and stable transmission speed.

Automatic Connection

It is enabled as default, then system will automatically connect with all devices in the server list, fast accessing and displaying. When the devices are over 32 pcs, system will remind to disable it, user can manually browse massive devices (e.g. 100+pcs) in the server list, it rapidly saves the mobile computing power and ensures phone running smoothly.

Alarm Push

Users can receive a notification when alarm of motion, sensor and smart event happens. Through the alarm push notification, users can immediately check the preview or playback, or manually trigger the alarm device, for face recognition event, user can check target photo.

Audio Intercom

Audio intercom between app and IPC is allowed. It' s very good for site precautions.

Fisheye

Fisheye de-warping and management are supported.

As a professional surveillance APP, Superlive Plus applies advanced hardware decoding technology, which greatly optimizes the resource. As a result, the preview and playback performance are much better.

Additionally, with smart self-adaption stream policy, it can make good balance among picture quality, decoding performance and bandwidth. For example, 1-split mode adopts master stream, 1080P or higher, 9-split mode with sub stream, CIF or D1.

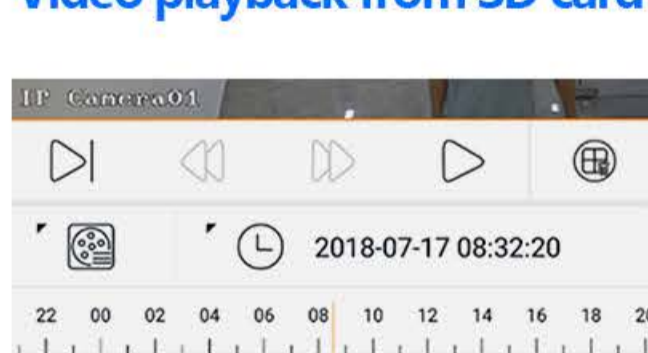

H.265 Decoding

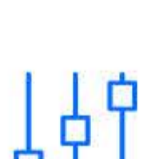

H.265 decoding is supported.

Video playback from SD card

Support browsing recorded video footage from SD card of IP camera.

PTZ Control

PTZ control for speed dome and motorized IPC is available.

Wide Compatibility

Supports Versions of Android 5.0 and above
Supports Versions of IOS 10 and above

QR Bug Report

When encounter software issues, QR Code can be generated and user can send it to the maintenance staff. Easier for R&D to identify the issue and fix it fast.

Sharing

User can share the surveillance information to facebook, whatsapp and other mainstream social APP through Superlive Plus.
